

MARYLAND SCIENCE CENTER VISITS DELMARVA DISCOVERY MUSEUM

The Maryland Science Center will bring its *Mainstreet Maryland Project* to the Lower Eastern Shore twice this summer with two visits to the Delmarva Discovery Museum located in Pocomoke City, Maryland.

On Saturday, July 11 at 1:00pm, Maryland Science Center educators performed “Science Unscripted”—a live science show filled with explosive and colorful chemical reactions, electrifying demonstrations, and fun physics experiments, to a packed house. Many area locals, as well as visiting tourists, filled the Discovery Museum to join in the excitement. After the show, the MSC educators invited guests to participate in hands-on activities that were fun for the whole family.

The team will return on Saturday, August 22 at 1:00pm to perform another live science show called “What’s the Matter”. This time the guests will get to explore the states of matter and the cool chemical reactions that happen in the world around us. This show will include the use of liquid nitrogen and colorful fire. Again, guests will be welcomed to stick around after the show to engage with the Maryland Science Center staff in fun, hands-on activities.

These visits are just two of the many that the Maryland Science Center hopes to make with their *MSC’S Mainstreet Maryland Project*. This initiative aims to bring the Science Center’s unique brand of informal, hands-on STEM education to community events across the state of Maryland.
